

XYZ

Senior DevOps Engineer

Professional Summary

Systems-focused Senior DevOps Engineer with strong Linux foundations, cloud infrastructure understanding, and a production debugging mindset. Hands-on experience in AWS, Kubernetes, Terraform, CI/CD, monitoring, and infrastructure reliability. Strong background in root-cause analysis, automation, deployment workflows, and building stable, maintainable environments. Legacy technical foundation in Visual Basic, Oracle, and IBM DataStage with a transition into modern cloud-native DevOps practices.

Technical Skills

- AWS (EC2, IAM, VPC, S3, CloudWatch, Auto Scaling, Load Balancer, Route 53, CloudTrail)
- Linux, Shell Scripting, System Debugging, Process Monitoring
- Docker, Kubernetes, Helm, Pod Troubleshooting, Resource Optimization
- Terraform, Infrastructure as Code, State Management
- Jenkins, GitHub Actions, Self-Hosted Runners, CI/CD Pipeline Design
- Prometheus, Grafana, Node Exporter, Monitoring and Alerting
- NGINX, Reverse Proxy, Load Balancing, Access Logs
- IAM Roles, Policies, Cloud Security, CloudTrail Auditing
- Ansible, YAML, Deployment Automation
- Bash, Python (Automation Basics), SQL
- Visual Basic, Oracle, IBM DataStage

Key Projects

- Self-Hosted GitHub Actions Runner on AWS EC2 – Built secure CI/CD execution using EC2 and IAM roles for deployment flexibility and secure secret handling.
- IAM Credential Theft Simulation with CloudTrail Detection – Simulated credential misuse scenarios and created practical detection workflows using CloudTrail and CloudWatch.
- Terraform-Based AWS Infrastructure Provisioning – Automated reusable cloud infrastructure provisioning using Terraform for consistency and reduced manual effort.
- Kubernetes Failure Simulation and Troubleshooting Lab – Simulated pod failures, restart loops, probe failures, and resource constraints to strengthen debugging capability.
- Prometheus + Grafana Monitoring Stack with Node Exporter – Implemented infrastructure monitoring dashboards for CPU, memory, disk, and system health visibility.

Professional Experience

Software Developer – Visual Basic + Oracle

Developed and maintained business applications using Visual Basic and Oracle. Worked on backend database operations, SQL queries, debugging, issue resolution, and performance

improvements. Focused on stable, maintainable code and production reliability.

DataStage Developer – IBM DataStage

Designed and supported ETL workflows, handled data extraction and transformation processes, job scheduling, failure handling, troubleshooting, and workflow improvements across systems.
